<u>Investigation</u>	<u>Observed Value</u>	<u>Biological Reference Interval</u>
<u>Malarial Antigen (Vivax & Falciparum) Detection</u> (EDTA Whole Blood)		
Plasmodium Falciparum Antigen	Negative	Negative
Plasmodium Vivax Antigen	Negative	Negative

Method : Immunochromatography.

Interpretation :

1. This is only a screening test. The Results of the test are to be interpreted with in the epidemiological, clinical and therapeutic context.
2. A positive result indicates malarial infection. False Positives may be seen due to cross reactivity and Persistence Antigenemia.
3. False negatives may occur due to High Antigenemia.

Associated Test:

- "Fever Panel by Multiplex PCR" for early diagnosis of Dengue virus, Chikungunya virus, Salmonella spp., West Nile virus, Plasmodium spp., Rickettsia spp. and Leptospira spp.

Investigation

Typhi Dot IgM

(Serum,Immunochromatography)

Observed Value

Negative

Biological Reference Interval

Negative

Remark :

1. Typhidot is a dot enzyme immunoassay for the rapid diagnosis of IgM antibodies against Salmonella typhi.
2. Typhidot test becomes positive within 2-3 days after infection.
3. Sensitivity of the test is 95%, as compared to Widal 75% .
4. Negative predictive value for the test is 96.1%.

Associated Test:

- "Fever Panel by Multiplex PCR" for early diagnosis of Dengue virus, Chikungunya virus, Salmonella spp., West Nile virus, Plasmodium spp., Rickettsia spp. and Leptospira spp.

Routine Examination Urine*

Investigation	Observed Value	Unit	Biological Reference Interval
<u>GENERAL EXAMINATION</u>			
Colour	Yellow		Pale Yellow
Transparency (Appearance)	Clear		Clear
Reaction (pH)	5.5		4.5-8
Specific Gravity	1.009		1.005-1.025
<u>CHEMICAL EXAMINATION (AUTOMATED URINE CHEMISTRY)</u>			
Urine Protein (Albumin)	Absent		Absent
Urine Ketones (Acetone)	Absent		Absent
Urine Glucose (Sugar)	Absent		Absent
Urobilinogen	Normal		Normal
Bilirubin	Negative		Negative
Nitrite	Negative		Negative
<u>MICROSCOPIC EXAMINATION (CUVETTE BASED IMAGING TECHNOLOGY)</u>			
Red blood cells	0	/hpf	0-2
Dysmorphic Red Blood Cells	Absent		Absent
Pus cells (WBCs)	0.15	/hpf	0-5
Epithelial cells	0.1	/hpf	0-5
Crystals	0	/hpf	0-1.36
Bacteria	17.7	/hpf	0-65.00
Trichomonas Vaginalis	Absent		Absent
Yeast cells	0	/hpf	0-0.68

1. Urine routine and microscopy is a screening test .
2. Abnormal results of chemical examination are confirmed by manual methods.
3. Pre-test conditions to be observed while submitting the sample- First void, mid-stream urine, collected in a clean, dry, sterile container is recommended for routine urine analysis, avoid contamination with any discharge from vaginal, urethra, perineum, as applicable, avoid prolonged transit time & undue exposure to sunlight.
4. During interpretation, points to be considered are Negative nitrite test does not exclude the presence of the bacteria or urinary tract infections.
5. Trace proteinuria can be seen with many physiological conditions like prolonged recumbency, exercise, high protein diet etc.
6. False reactions for bile pigments, proteins, glucose and nitrites can be caused by peroxidase like activity by disinfectants, therapeutic dyes, ascorbic acid and certain drugs etc.
7. Physiological variations may affect the test results.

ESR - Erythrocyte Sedimentation Rate 3
(EDTA Whole Blood)

mm/hr

0-15

Method: Automated Westergren

Interpretation:

1. It indicates presence and intensity of an inflammatory process, never diagnostic of a specific disease. Changes are more significant than a single abnormal test.
2. It is a prognostic test and used to monitor the course or response to treatment of diseases like tuberculosis, bacterial endocarditis, acute rheumatic fever, rheumatoid arthritis, SLE, Hodgkins disease, temporal arteritis, polymyalgia rheumatica.
3. It is also increased in pregnancy, multiple myeloma, menstruation, and hypothyroidism.
